SUBJECT INDEX

A

Acetylenes, from *Psathyrella* 921
Alangiaceae 177
Alangium lamarckii, deacetyllipecoside synthase from 177
Algae 975
Alkaloids,
  from *Veratrum*, transformation of by *Cunninghamella* 19
  piperidine, from *Aloe* 979
Alkanediols, long-chain, from *Myricaria* leaf waxes 55
5-*n*-Alkylresorcinols, from *Apatococcus* 975
Alliinase levels, in *Leucocoryne* 127
Allylic alcohol dehydrogenase, from *Nicotiana* cultured cells 297
Aloe, chromones and anthrones from 949
A. castanea, chromone ester from 117
A. sabaea, chlorinated amide and piperidine alkaloids from 979
Alternaria alternata, bicycloalternarenes from 987
Amides,
  antifungal, from *Piper* 621
  chlorinated, from *Aloe* 979
1-Aminocyclopropane-1-carboxylic acid oxidase, from apples, inhibition of 203
Angiospermae, modelling of, as networks of biodiversity 559
Annonaceae 439, 551, 567
  distribution of flavonoids in 567
  floral scents of beetle- and thrip-pollinated species of 551
Anthocyanic vacuolar inclusions, significance of in flower coloration 327
Anthocyanins, malyl, cyclic, from *Dianthus* 937
Anthracenes, from *Auxemma* 793
Anthraquinones, tetrahydro-, biosynthesis of in fungi 23
Anthrone *C*,*O*-diglycoside, from *Picramnia* 837
Anthrones, from *Aloe* 949
Apatococcus constipatus, 5-*n*-alkylresorcinols from 975
Aphid-repellent glycoside, from *Solanum* 217
Apocynaceae 97, 403, 531
Aquifoliaceae 853
Arabidopsis thaliana, metabolism of castasterone in seedlings of 97
Araucaria angustifloia, phenylpropanoids and biflavones in 575
Araucariaceae 575
Aristolochia ridicula, bi-and tetraflavonoids from 823
Aristolochiaceae 823, 971
Aroma characterisation, of *Leucocoryne* 127
Aromatics, from *Zataria* 933
Asarum canadense, chalcone and flavonol glycosides from 971
Aspalathus linearis, flavanone *C*-glycosides from 43
Aspergillus niger, biotransformation of geraniol, nerol and citral by 363
Asphodelaceae 117, 949, 979
Asteraceae 51, 141, 255, 305, 617, 721, 769, 809, 863, 903
Atranones, from *Stachybotrys* 663
Auxemma oncocalyx, anthracenes from 793

B

Baccharis trimera, diterpenoid from, with relaxant effect on vascular smooth muscle 617
Bauhinia malabarica, antimalarial bibenzyls from 349
Benzocoumarin, cytotoxic, from *Vismia* 35
Benzophenones,
  cytotoxic, form *Vismia* 35
  polyisoprenylated, from *Clusia* 29, 755
Benzylbenzoate diglucosides, from *Curculigo* 411
Berberidaceae 537
Beta vulgaris, tissue-specific developmental changes in cell-wall ferulate in 103
Bibenzyls, antimalarial, from *Bauhinia* 349
Bicycloalternarenes, from *Alternaria* 987
Biflavones, in *Araucaria*, at different stages of development 575
Biflavonoids, from *Aristolochia* 823
Bignoniaceae 359
Bioactive plant products,
  allelopathic sulphur compounds and secoiridoids, from *Sphenoclea* 131
  antialgal diterpenes, from *Ruppia* 909
  antibacterial
    eudesmanes, from *Carissa* 403
    nor-lignans, from *Styrax* leaves 597
    polyisoprenylated benzophenones, from *Clusia* 29
  antifungal
    amides, from *Piper* 621
    flavanone, from *Lonchocarpus* roots 953
    nor-lignans, from *Styrax* leaves 597
    monoterpene production, in elicited cell suspension cultures of *Piqueria* 51
    sesquiterpene lactones, from *Centaurea* 903
  antileishmanial neolignans, from *Virola* 589
  antimalarial preracemosols A and B, from *Bauhinia* 349
  anti-platelet aggregation active stilbenes, from aerial parts of *Rheum* 407
  aphid-repellent spirostane saponin, from *Solanum* 217
  bioactive lignoids, effect of on *Rhodnius* 611
  CRH-1 receptor binding inhibitory bisanthraquinone glycosides, from *Hypericum* 941
  cytotoxic
    benzophenones and benzocoumarins, from *Vismia* 35
    clerodane diterpene esters, from *Laetia* 233
    cyclic depsipeptide, from marine *Fusarium* 223
    diterpenoids, from *Haplopappus* 863
    lignan and sesquiterpenoids, from *Taiwania* 227
  DNA strand-scission active benzophenone, from *Vismia* 35
  glycosomal glyceraldehyde-3-phosphate dehydrogenase-inhibitory flavonoids, from *Neoraputia* 643
  hepatotoxic [D-Leu[1]]microcystin-LR, from *Microcystis* cyanobacterium 383
  micromolecules from plants, active against snake bite 627
  molluscicidal saponins, from *Phytolacca* 603
  muscle-relaxant diterpene, from *Baccharis* 617
  phytoalexins, from *Sinapis*, elicitation, isolation and synthesis of 213
  plant growth regulating activity, of castasterone analogues 121
  vascular active norlignan glucoside, from *Curculigo* 411
Biodiversity, and drug discovery 463
Biological activities, of flavonoids 481
Biosynthesis,
  of dimethylallyl moiety of glabrol, in *Glycyrrhiza* hairy root cultures 323
  of gibberellins, in rice seedlings 317
  of 28-norcastasterone, in *Arabidopsis* and other plants 97
  of podophyllotoxin, in *Linum* and *Podophyllum*, dirigent-mediated 537
  of sesquiterpenes, role of germacrene D as precursor of 141
  of spirobisnaphthalenes, in fungi 311
  of tetrahydroanthraquinones, in fungi 23
  of triterpenoids, in *Maytenus* and *Salacia*, compartmentalization of 741
  of vindoline, in *Catharanthus*, light activation of 531

PII: S0031-9422(01)00011-5

Biotransformation,
of citral, by sporulated surface cultures of *Aspergillus* and *Penicillium* 363
of essential oil constituents, by germinating wheat seed 375
of geraniol, by sporulated surface cultures of *Aspergillus* and *Penicillium* 363
of jervine, by *Cunninghamella* 19
of nerol, by sporulated surface cultures of *Aspergillus* and *Penicillium* 363
Bisanthraquinone glycosides, biologically active, from *Hypericum* 941
Boraginaceae 793
Brachiaria, accumulation of 1,3-di-*O*-*trans*-feruloylquinic acid in 389
Brassicaceae 97, 213
Brassinosteroids,
biosynthetic intermediates of 97
synthesis and bioactivity of 121
Bredemeyera brevifolia, pentaoxygenated xanthones and fatty acids from 847
Butanolide, from *Mollinedia* 859

C
Caffeate ester of 3,4-dihydroxy-β-phenylethanol, from *Teucrium* 927
Caffeine, from *Ilex* epicuticular wax 853
Caffeoyl phenylethanoid glycosides, in *Plantago* species 337
Calophyllum teysmannii, xanthones from 833
Caprifoliaceae 879
Carissa lanceolata, antibacterial eudesmanes from 403
Caryophyllaceae 327, 937
Castasterone,
as biosynthetic origin of 28-norcastasterone 97
6α- and 6β-hydroxy analogues of, synthesis and bioactivity of 121
Catharanthus roseus, light activation of vindoline biosynthesis in 531
Celastraceae 741
Centaurea, antifungal sesquiterpene lactones from 903
Cestrum sendtnerianum, steroidal saponins from 715
Chalcones, pyrano-, enzyme inhibitory, from *Neoraputia* 643
Chemotaxonomic studies,
of biflavones, in *Araucaria*, at different stages of development 575
of caffeoyl phenylethanoid glycosides, in *Plantago* 337
of 6′-*O*-coumaroylaloesin, in *Aloe* section *Anguialoe* 117
of essential oils,
in populations of *Thymus caespititius* 241
in species of *Teucrium pumilum* aggregate 397
of flavonoids,
in Annonaceae 567
in Myristicaceae 505
of iridoid glucosides, in *Plantago* 337
of phenylpropanoids, in *Araucaria*, at different stages of development 575
of polysaccharides, in seed cell walls of Vochysiaceae 581
of sesquiterpene lactones, in *Viguiera* 255
Chenopodiaceae 59, 103
Chlorociboria, absolute configuration of extended quinone from 237
Chromene, from *Paramignya* stems 269
Chromone ester, as taxonomic marker for *Aloe* section *Anguialoe* 117
Chromones, from *Aloe* 949
Cipadessa baccifera, tetranortriterpenoids, sterols and heneicosenes from 867
Citral, biotransformation of by *Aspergillus* and *Penicillium* 363
Clusia, polyisoprenylated benzophenones from 755
C. grandiflora, antibacterial polyisoprenylated benzophenones from 29
Clusiaceae 29, 35, 183, 755, 815, 833, 941
Coffea arabica, polyphenol oxidase from leaves and fruit endosperm of 285
Copaifera, composition of oleoresins in 773
Crataegus monogyna, epicuticular wax composition in flowers of 111
Cunninghamella elegans, transformation of jervine by 19
Curculigo pilosa, benzylbenzoate and norlignan glucosides from 411
Cyanobacteria 383

D
Deacetyllipecoside synthase, from *Alangium* 177
Depsipeptide, cyclic, cytotoxic, from marine *Fusarium* 223
Dermocybe splendida, biosynthesis of tetrahydroanthraquinones in 23
Dianthus caryophyllus,
anthocyanic vacuolar inclusions in flowers of 327
cyclic malyl anthocyanins from 937
Dichloroanisoles, from *Psathyrella* 921
Dichromenoxanthones, from *Tovomita* 815
1,3-Di-*O*-*trans*-feruloylquininc acid, from nutrient-deprived *Brachiaria* roots 389
Dihydrochalcone, dimeric, from *Goniothalamus* 439
Dioclea lasiophylla, antioxidant A-type proanthocyanidin from 805
Diterpene esters, clerodane, cytotoxic, from *Laetia* 233
Diterpenoids,
cytotoxic, from *Haplopappus* 863
from *Baccharis*, having relaxant effect on vascular smooth muscle 617
from *Excoecaria* 891
from *Laennecia* 721
from toxigenic mould *Stachybotrys* 663
from *Vitex* fruits 873
ent-labdane, antialgal, from *Ruppia* 909
Dorstenia mannii, prenylated flavonoids from 915

E
Erythrina sacleuxii, isoflavanones from stem bark of 457
Essential oils,
biotransformation of by germinating wheat seed 375
chemotaxonomic value of in *Teucrium pumilum* aggregate 397
from *Thymus* populations, chemical polymorphism of 241
Ethylene inhibitors, acting on 1-aminocyclopropane-1-carboxylic acid oxidase 203
Euphorbiaceae 891
Eustoma grandiflorum, anthocyanic vacuolar inclusions in flowers of 327
Excoecaria agallocha, diterpenoids from 891

F
Fabaceae 11, 43, 67, 323, 349, 429, 447, 457, 773, 787, 799, 805, 953, 959
Fatty acids, from *Bredemeyera* 847
Ferulate, in sugar beet cell-wall, tissue-specific developmental changes in 103
Flacourtiaceae 233
Flavanone *C*-glycosides, from fermented rooibos 43
Flavanones,
antifungal, from *Lonchocarpus* 953
prenylated,
biosynthesis of in hairy root cultures of *Glycyrrhiza* 323
from *Paramignya* stems 269
Flavone glycosides, from *Onobrychis* 67
Flavonoid
dimers and tetramer, from *Aristolochia* 823
glycosides,
from *Asarum* 971
from *Salvia* 263
research, advances in 481
Flavonoids,
distribution of in Annonaceae 567
distribution of in Myristicaceae 505
enzyme inhibitory, from *Neoraputia* 643
from *Goniothalamus* 439
from *Glycyrrhiza* hairy root cultures 447
from *Lonchocarpus* roots 787
C-glucosyl, from *Piper* leaves 783
C-methyl, from Myrtaceae leaf waxes 965
C-prenyl, from *Tephrosia* roots 799
prenylated, from *Dorstenia* 915
Flavonol glycosides, from *Siparuna* 679

Floral volatiles, from beetle- and thrip-pollinated Amazonian Annonaceae 551
Fragaria × *ananassa*, endogenous gibberellins from 887
Fraxinus americana, secoiridoid glucosides from 275
Friedolanostanes, from *Garcinia* pericarp 183
Fungi 19, 23, 223, 237, 311, 363, 663, 921, 983, 987
Furanocoumarin, from *Halfordia* 675
Fusarium, cytotoxic cyclic depsipeptide from 223

G
Garcinia hombroniana, lanostanes and friedolanostanes from 183
Gentianaceae 327
Geraniol, biotransformation of by *Aspergillus* and *Penicillium* 363
Germacrene D, role of as a precursor in sesquiterpene biosynthesis 141
Gibberellin biosynthesis, in rice seedlings 317
Gibberellins, endogenous, from strawberry 887
Gibbestatin B, inhibition of gibberellin A3-induced expression of α-amylase by 1
Glabrol, biosynthesis of prenyl group of, in hairy root cultures of *Glycyrrhiza* 323
Glycyrrhiza glabra,
biosynthesis of prenyl group of glabrol in hairy root cultures of 323
flavonoids from hairy root cultures of 447
G. uralensis, isoflavonoids and flavonoids from 959
Goniothalamus, dimeric dihydrochalcone and other flavonoids from 439
Guarea macrophylla, terpenes from 727

H
Halfordia kendack, furanocoumarin from 675
Haplopappus rigidus, cytotoxic diterpenoids from 863
Heneicosenes, from *Cipadessa* 867
Hepaticae 197, 247
Herbertus sakuraii, herbertane sesquiterpenoids from 247
Hippocrateaceae 741
Histone deacetylase inhibitors, ability of to alter cell proliferation 11
Homospermidine synthase, from *Senecio*, cloning and expression of 305
Hordeum vulgare, inhibition of gibberellin A3-induced expression of α-amylase in by gibbestatin B 1
Hydrocinnamic acid glycosides, from *Onobrychis* 67
Hypericum perforatum, biologically active bisanthraquinone glycosides from 941
Hypoxidaceae 411

I
Ilex paraguariensis, caffeine and theobromine from epicuticular wax of 853
Illiciaceae 883
Illicium merrillianum, *seco*-prezizaane sesquiterpenes from 883
Iridoid glycosides,
from *Phlomis* 353
from *Plantago* species 327
from *Pseudocalymma* 359
Isoflavanones, from *Erythrina* stem bark 457
Isoflavonoids, from *Glycyrrhiza* 959

J
Jervine, transformation of by *Cunninghamella* 19

K
Kaplanin, from *Piper* leaves 783

L
Laennecia sophiifolia, diterpenes from 721
Laetia corymbulosa, cytotoxic clerodane diterpene esters from 233
Lamiaceae 241, 263, 353, 397, 927, 933
Lanostanes, from *Garcinia* pericarp 183
Ledol, from *Renealmia*, stereochemistry of 749
Leucocoryne, alkenyl-L-cysteine sulfoxides, alliinase and aroma in 127
Lignans,
analgesic, from *Lychnospora* 809
cytotoxic, from *Taiwania* heartwood 227
dibenzocyclooctadiene, from *Magnolia* 653
nor-, antibacterial and antifungal, from *Styrax* 597
tetrahydrofuran, from *Piper* 843
Lignoids, effects of on hematophagous bug 611
Liliaceae 127
Limonoids, from *Trichilia* 711, 733
Linaceae 537
Linum flavum, dirigent-mediated podophyllotoxin biosynthesis in 537
Lonchocarpus latifolius, flavonoids from roots of 787
L. oaxacensis, flavanones from 953
Lonicera japonica, secoiridoid glycosides from 879
Lychnophora ericoides, analgesic activity of lignans form 809

M
Magnolia pyramidata, dibenzocyclooctadiene lignans from 653
Magnoliaceae 653
Malus, inhibition of 1-aminocyclopropane-1-carboxylic acid oxidase from 203
Marchantia polymorpha, secretion of 37-kDa peroxidase by 197
Maytenus aquifolium, compartmentalization of triterpenoid biosynthesis in 741
Medicago truncatula, peptides from cell walls of nodules or uninfected roots of 429
Megastigmane glycosides, from *Phlomis* 353
Meliaceae 711, 727, 733, 867
[D-Leu[1]]Microcystin-LR, cyanobacterial toxin from *Microcystis* 383
Microcystis RST 9501, [D-Leu[1]]microcystin-LR from 383
Mollinedia marliae, butanolide from 859
Monimiaceae 679, 859
Monoterpenes, antifungal, production of in elicited cultures of *Piqueria* 51
Moraceae 915
Myricaria germanica, long-chain alkanediols from 169
Myristicaceae 505, 589
distribution of flavonoids in 505
Myrtaceae, *C*-methyl flavonoids from leaf waxes of 965

N
Natural product drug discovery, developments in 463
Neolignans, from *Virola*, anti-leishmanial activity of 589
Neoraputia magnifica, enzyme-inhibiting pyrano chalcones and flavone from 643
Nerol, biotransformation of by *Aspergillus* and *Penicillium* 363
Nicotiana tabacum, 38 kDa allylic alcohol dehydrogenase from 297
Norlignan, from *Curculigo*, vascular acticity of 411

O
Oleaceae 275
Oleoresins, composition of in *Copaifera* 773
Onobrychis viciifolia, phenolic glycosides from 67
Oryza sativa, gibberellin biosynthesis in seedlings of 317
Oxanthrone *C*,*O*-diglycoside, from *Picramnia* 837

P
Paramignya griffithii, flavanones, triterpene and chromene from 269
Parthenium hysterophorus, sesquiterpene lactone variability in 769
Pectin esterase activity, in cold-stored peaches 55
Penicillium, biotransformation of geraniol, nerol and citral by 363
Peperomia pellucida, dimeric phenylethanoid from 779
Peptides, from cell walls of *Medicago* nodules or uninfected roots 429

Peroxidase, secreted from liverworts subjected to chemical stress 197
Phenolic glycosides,
from *Salvia* 263
from *Teucrium* 927
Phenylethanoid, dimeric, from *Peperomia* 779
Phenylpropanoids,
from *Piper* 843
in *Araucaria* at different stages of development 575
Phlomis aurea, iridoid and megastigmane glycosides from 353
Phytoalexins, from *Sinapis*, elicitation, isolation and synthesis of 213
Phytobusiness, requiring social chemistry 93
Phytolacca icosandra, molluscicidal saponins from 603
Phytolaccaceae 603
Picramnia teapensis, anthrone and oxanthrone *C,O*-diglycosides from 837
Piper, antifungal amides from 621
P. lhotzkyanum, *C*-glucosylflavone from 783
P. solmsianum, phenylpropanoids and tetrahydrofuran lignans from 843
Piperaceae 621, 779, 783, 843
Piqueria trinervia, production of antifungal monoterpenes in 51
Pisum sativum, ability of histone deacetylase inhibitors to alter cell proliferation in 11
Plantaginaceae 337
Plantago, chemotaxonomy of, using iridoid and caffeoyl phenylethanoid glycosides 337
Poaceae 1, 317, 375, 389
Podophyllotoxin biosynthesis, dirigent-mediated, in *Linum* and *Podophyllum* 537
Podophyllum peltatum, dirigent-mediated podophyllotoxin biosynthesis in 537
Polygala sabulosa, styrylpyrones and dihydrostyryl-2-pyrones from 819
Polygalaceae 819, 847
Polygalacturonase activity, in pectin fractions of cold-stored peaches 191
Polygonaceae 407
Polyphenol oxidase, from coffee leaves and fruit endosperm 285
Polyphenols, from grape seed, changes in during fruit ripening 77
Polysaccharides, from Vochysiaceae seed cell walls, monomer composition of 581
Potamogetonaceae 909
Proanthocyanidin, A-type, antioxidant, from *Dioclea* 805
Protein biochemistry,
allylic alcohol dehydrogenase, 38 kDa, from *Nicotiana* cultured cells 297
deacetyllipecoside synthase, from *Alangium* 177
desacetoxyvindolene 4-hydroxylase, cellular localization of, in *Catharanthus* 531
pectin esterase and polygalacturonase activities, in peach pectin 191
peroxidase, 37 kDa, secreted from liverworts in response to chemical stress 197
polyphenol oxidase, from coffee leaves and fruit endosperm 285
tryptophan decarboxylase, cellular localization of, in *Catharanthus* 531
Prunus persica, pectin esterase, polygalacturonase and gel formation in peach pectin 191
Psathyrella scobinacea, acetylenes and dichloroanisoles from 921
Pseudocalymma elegans, iridoid glycosides from 359

Q

Quillaja saponaria, triterpene saponins with new acyl components from 419

R

Racemosol, from *Bauhinia*, possible biosynthesis of 349
Renealmia chrysotrycha, stereochemistry of ledol from 749
Rheum palaestinum, anti-platelet aggregation active stilbenes from 407
Rhodnius prolixus, effects of lignoids on 611
Rosaceae 111, 191, 203, 419, 887
Rubiaceae 285
Rubus idaeus, epicuticular wax composition in flowers of 111
Ruppia maritima, antialgal *ent*-labdane diterpenes from 909
Rutaceae 269, 643, 675

S

Salacia campestris, compartmentalization of triterpenoid biosynthesis in 741
Salvia officinalis, flavonoid and phenolic glycosides from 263
Saponins,
steroidal,
aphid-repellent, from *Solanum* 217
from *Cestrum* leaves 715
triterpenoid,
from *Quillaja* 419
molluscicidal, from *Phytolacca* 603
Secoiridoid glycosides,
from *Fraxinus* 275
from *Lonicera* flower buds 879
Secoiridoids, allelopathic, from *Sphenoclea* 131
Senecio vulgaris, cloning and expression of homospermidine synthase from 305
Sesquiterpene biosynthesis, role of germacrene D as a precursor in 141
Sesquiterpene lactones,
antifungal, from *Centaurea* 903
from *Viguiera* 255
in *Parthenium*, variability of 769
Sesquiterpenoids,
antibacterial, from *Carissa* 403
cytotoxic, from *Taiwania* heartwood 227
from *Herbertus* 247
seco-prezizaane, from *Illicium* 883
Simaroubaceae 837
Sinalbins A and B, from *Sinapis* 213
Sinapis alba, elicitation, isolation and synthesis of phytoalexins from 213
Siparuna apiosyce, flavonol glycosides from 679
Snake venom neutralizing plant compounds, micromolecular nature of 627
Solanaceae 217, 297, 715
Solanum laxum, aphid repellent spirostane saponin from 217
Solidago, germacrene D from, as a precursor in sesquiterpene biosynthesis 141
Sphenoclea zeylanica, allelopathic sulphur compounds and secoiridoids from 131
Sphenocleaceae 131
Spinacia oleracea, effect of triacontanol on lipid peroxidation in 59
Spirobisnaphthalenes, from fungi, biosynthesis of 311
Stachybotrys chartarum, atranones and diterpenes from 663
Sterols, from *Cipadessa* 867
Stilbenes, anti-platelet, from *Rheum* aerial parts 407
Styracaceae 597
Styrax ferrugineus, antibacterial and antifungal *nor*-lignans from 597
Styrylpyrones, form *Polygala* 819
Sulphoxides, in *Leucocoryne* 127
Sulphur compounds, allelopathic, from *Sphenoclea* 131

T

Taiwania cryptomerioides, cytotoxic lignans and sesquiterpenoids from 227
Tamaricaceae 169
Tannins, hydrolyzable, oxidative transformations of and plant evolution 513
Taxodiaceae 227
Tephrosia tunicata, *C*-prenylflavonoids from 799
Terpenoids, from *Guarea* leaves 727
Tetraflavonoid, from *Aristolochia* 823
Teucrium pilosum, decarboxyrosmarinic acid and its glycoside from 927
T. pumilum, chemotaxonomic value of essential oils in 397
Theobromine, from *Ilex* epicuticular wax 853

Thymus caespititius, chemical polymorphism of essential oils from 241
Tovomita brasiliensis, dichromenoxanthones from 815
Triacontanol, inhibition of enzymatic and non-enzymatic lipid peroxidation by 59
Trichilia elegans,7β-oxygenated limonoids from 733
T. estipulata, limonoid from 711
Triterpenoids,
friedelane and quinonemethide, biosynthesis of in *Maytenus* and *Salacia* 741
from *Garcinia* pericarp 183
from *Paramignya* stems 269
tetranor-, from *Cipadessa* 867
Triticum aestivum, biotransformation of essential oils by germinating seeds of 375
Tuber borchii, volatiles from 983

V
Veratrum viride, transformation of jervine from, by *Cunninghamella* 19
Verbenaceae 873
Viguiera, sesquiterpene lactones from 255
Vindolene biosynthesis, role of light in activating late stages of 531
Virola, antileishmanial activity of neolignans from 589
Vitaceae . 77
Vitex trifolia, diterpenoids from 873
Vitis vinifera, changes in seed polyphenols during fruit ripening of 77
Vochysiaceae, monomer composition of seed cell wall polysaccharides from 581
Volatiles, from *Tuber* mycelium 983

W
Waxes, epicuticular, composition of in raspberry and hawthorn flowers 111

X
Xanthones,
from *Calophyllum* 833
pentaoxygenated, from *Bredemeyera* 847
tetraoxygenated, distribution, bioactivity and biosynthesis of 683
Xylindein, from *Chlorociboria*, absolute configuration of 237

Z
Zataria multiflora, aromatics from 933
Zingiberaceae 749

PHYTOCHEMISTRY

AIMS AND SCOPE

Phytochemistry is the international journal of plant chemistry, plant biochemistry and molecular biology, published 24 times per annum by Elsevier Science. The majority of these publications will be *Regular Issues* covering research on all aspects of pure and applied plant biochemistry, especially that which leads to a deeper understanding of the factors underlying the growth, development and metabolism of plants and the chemistry of plant constituents. *Phytochemistry* is a primary source for papers dealing with plant secondary compounds, especially with regard to their biosynthesis and diverse properties. This specialisation is reflected further in *Special Issues* (Reports on Structure Elucidation) devoted exclusively to structure elucidation of phytochemicals which will now be published 5–6 times per annum. *Phytochemistry* is the official organ of 'The Phytochemical Society of Europe' and 'The Phytochemical Society of North America'. The Journal is currently divided into several sections as indicated below, but papers which cut across these sections or which are on any other aspect of plant biochemistry will also be considered.

Editorial Comment will be an occasional series where Regional Editors, Board Members or other scientists will be invited to comment on phytochemistry topics of global interest and debate.

Molecules of Interest will consist of invited short reviews (two printed pages) of individual compounds or macromolecules of plant, fungal or algal origin, which are currently attracting significant applied, commercial or biological interest. These can be novel compounds or newly discovered properties of familiar compounds.

Review Articles are published at regular intervals, ranging in scope from primary metabolism and regulation of plant growth, through plant enzymology to natural product chemistry and the biological activity of plant products. They deal with significant new areas of research and are intended to command the interest of the general reader. Authors should consult the Editors before preparing such articles, by submitting an outline of their proposed review.

The *Protein Biochemistry* section will contain reports on the purification of proteins directly from the organism or by heterologous expression. These will preferentially include information on enzymological properties, macromolecular structure and exploration of function, by site-directed mutagenesis and/or subcellular localisation. Reports of work which employ proteomics will be particularly welcome and are intended to complement the next section.

The *Molecular Genetics and Genomics* section contains papers on nucleic acid biochemistry, function and expression. This section will contain reports of genes and their analysis and expression, which demonstrate novelty and/or biological significance. Papers and communications which contain only sequence data or which duplicate studies of gene expression in other species will not generally be acceptable. Gene discovery using mutants and reverse genetics or exploration of functionality of genes in transgenic organisms will however be encouraged, if this provides new insight into unknown or previously known sequences.

The *Metabolism* section focuses on work in primary, intermediary and secondary metabolism. Contributions are particularly encouraged on the biosynthesis of macromolecules such as polysaccharides, lipids and other polymers such as lignin and their assembly in higher orders of structure such as membranes and cell walls. This section will also contain papers describing the further elucidation of known pathways and of newly discovered alternatives, as well as all aspects of metabolic regulation including regulatory molecules and proteins such as protein kinases and transcription factors. Studies directed toward understanding the regulation and possible cross-talk between pathways through the use of transgenic organisms are also strongly encouraged, as are those describing aspects of biochemistry regulated during growth and development at any stage of the organism.

The *Ecological Biochemistry* section contains papers on biochemical adaptations in plants to environmental stress; pollination biochemistry; plant toxins and their effects on animals, phytoecdysones, antifeedants; herbivory, plant defence and insect feeding preferences; utilization of plant substances by animals; and all aspects of biochemical plant pathology, including the production of phytotoxins and phytoalexin elicitation. Contributions on various symbiotic interactions are also welcomed. Also of considerable interest is the elucidation of the signalling molecules that govern the nature of the responses involved in the interaction between two or more organisms.

The *Chemotaxonomy* section contains papers on the comparative biochemistry of plants. These may range from distributional studies on low molecular weight compounds in a group of fungi, algae or higher plants to the comparative amino acid sequences of related proteins within groups of species. Papers on infraspecific chemical variation are also included here.

The *Bioactive Products* section contains papers on novel plant chemistry, where the biological activities of one or more of the new plant compounds are described. Descriptions of possible pharmacological, medical or therapeutic use or of dietary significance are encouraged if known. This section may also contain analysis of genetically modified plants that have been analysed for changes in their profiles of bioactive plant products. Such bioassay data should include comparable results for a known agent, so that the reader can judge the relative importance of any new finding. Full experimental details of the biological tests should be provided, and studies judged significant by the Editors may be invited to be discussed in the *Molecules of Interest* section before publication. In such cases, this review will appear in the same issue as the publication.

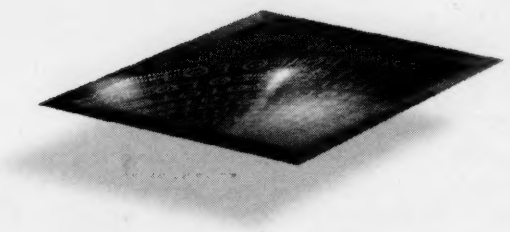
The *Chemistry* section contains papers on: growth substances, macromolecules, primary metabolites, terpenoids, polyketides, phenylpropanoids, flavonoids, alkaloids and compounds of mixed biosynthetic origin. Authors investigating the chemistry of a given plant species should aim to publish their results in a single manuscript rather than in a series of papers which describe each new compound as it is found. The structural analysis of new plant substances is now so routine that papers reporting a single novel compound of expectable structure (e.g. a new triterpene fatty acid ester) are rarely acceptable, unless other novel information on the plant is included.

Accelerated Publications are published at regular intervals. Papers appearing under this heading will have received fast publication due to their particular significance. Authors are encouraged to provide strong justification as to why papers should be considered in this category.

Book Reviews are published regularly and the journal welcomes the submission of new books for review, to the U.K. office. Symposia and Society announcements will be published, at the discretion of the Editors. Preliminary communications will not, however, be considered.

Authors should consult the latest instructions to authors see *Phytochemistry* (Volume 56, Issue 1) before preparing their manuscripts. All contributions must be in English and should be submitted to the appropriate Regional Editor for their geographical region. For U.K., Africa, The Commonwealth & Rest of the World: Professor G. P. Bolwell, Division of Biochemistry, School of Biological Sciences, Royal Holloway, University of London, Egham, Surrey, TW20 0EX, U.K. For the Americas and East Asia: Professor N. G. Lewis, Institute of Biological Chemistry, Washington State University, Pullman, WA 99164-6340, U.S.A. For Continental Europe and Russia: Professor D. Strack, Institut für Pflanzenbiochemie, Weinberg 3, D-06120 Halle (Saale), Germany.

Choose from broad collections of primary journal literature and powerful secondary databases, all deliverable via the Internet or your local Intranet—building blocks for the digital library you need.



SCIENCE DIRECT®

For the Digital Library You Want

ScienceDirect offers desktop access to over 1 million articles published in nearly 1,200 journals spanning 16 fields of science and provides researchers with some 2 million bibliographic citations and abstracts. Access may also be provided to an additional 30 million abstracts via ScienceDirect's secondary databases.

Unprecedented content, navigability and customization options
Whether you choose the breadth of the ScienceDirect multi-publisher platform or one of our discipline or industry-focused solutions, you'll be providing your institution with a dynamic, efficient and integrated solution to access the world's critical STM literature.
